pilot

Micro-credentials

Register to education

Courses at second institution

Collaborative curriculum

End of study

After study

Using Own eID

Possible interpretations of the eduID

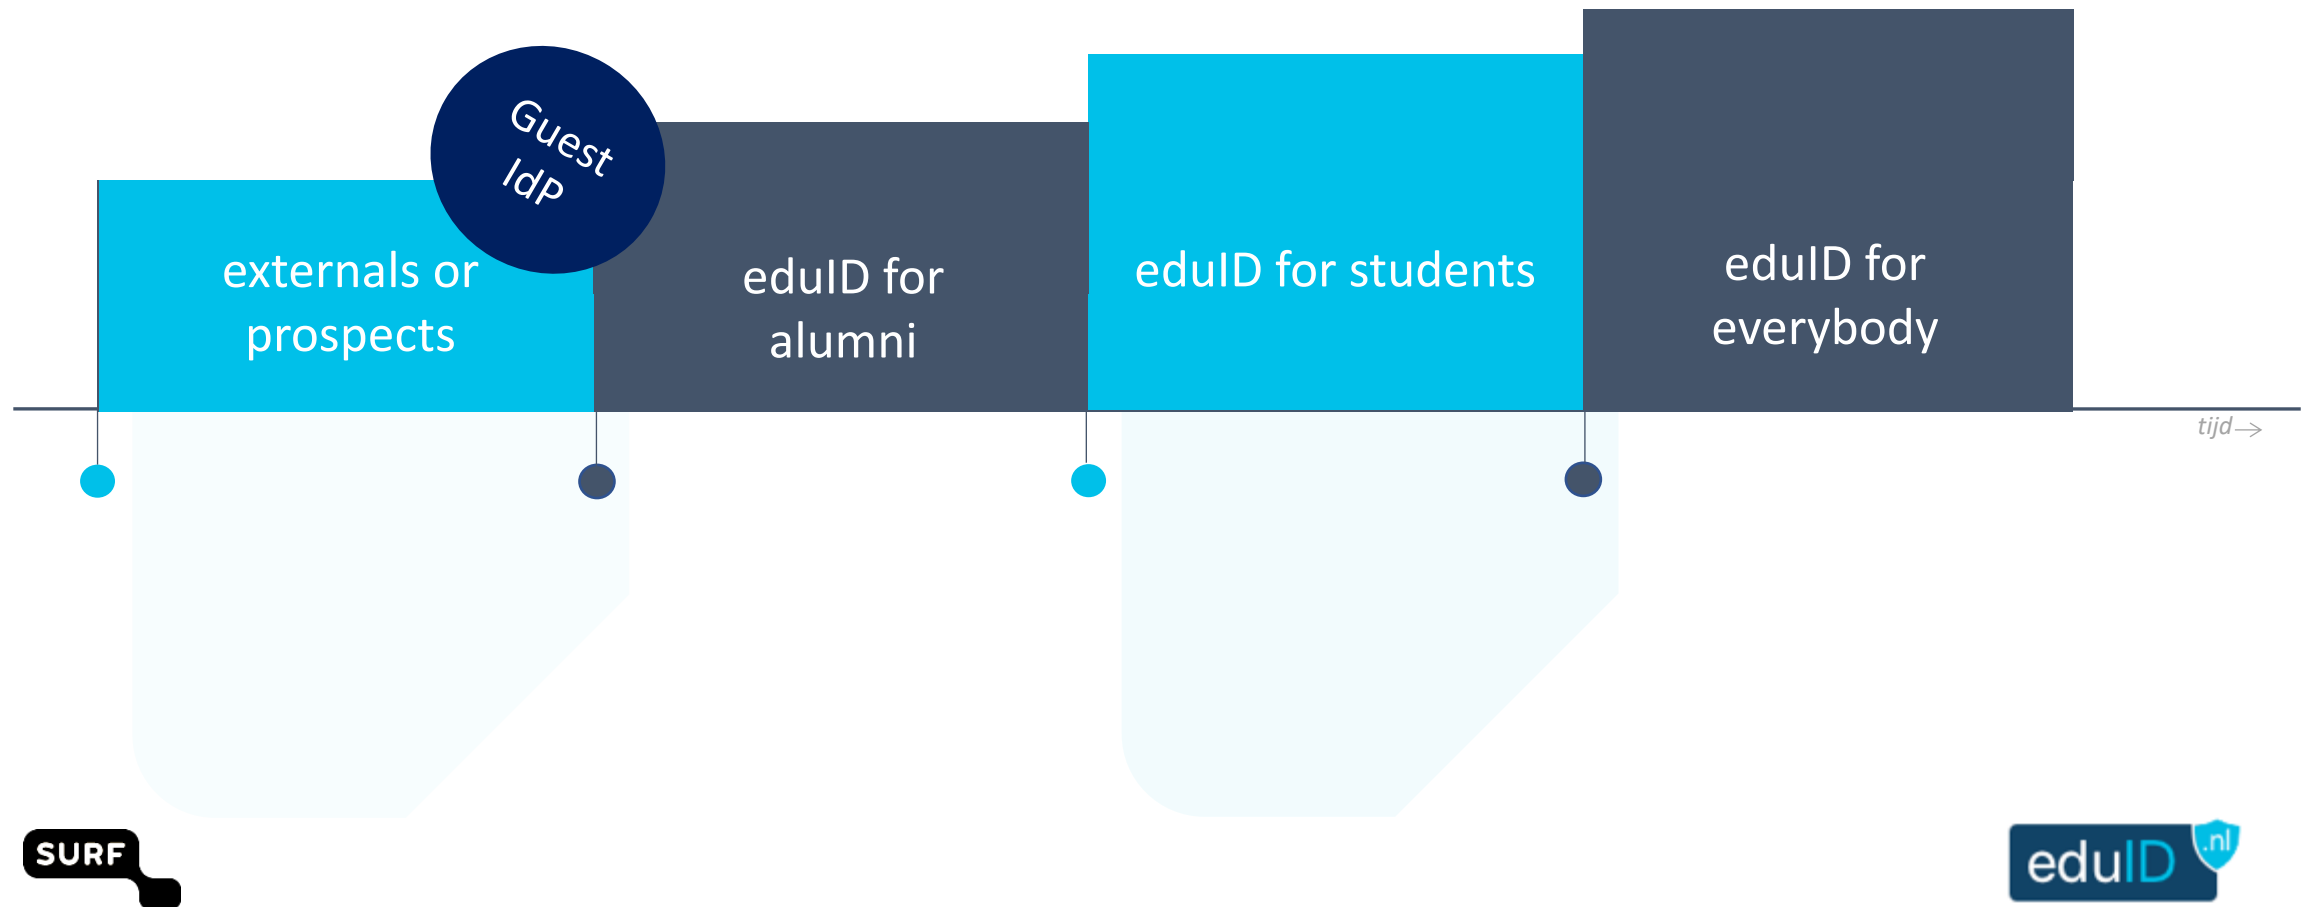

What does eduID offer for educational institutions?

- Lowering administrative burden of student mobility and increased collaboration between institutions
- Better GDPR position as the student is in its own control his data
- More certainty with regards to the digital identity of students in data exchange between institutions
- Better support for identification of target groups who normally are not or no more in the student information system: Prospects, guests, 'external' students, alumni
- Harmonisation in recognizing "internal" and "external" students

What does eduID offer for students

- Better and simpler administrative process for taking courses at other institutions
- The student is in control of its own information
- Supporting life long learning, student is recognizable over the course of his whole learning carrier
- A solid and simple solution to access educational systems, an eID systems for education
